Software Tester

Job Summary

As a Software Tester you will play an integral part in the company's product development and client onboarding process by providing quality assurance on all system development, ensuring that project timelines are maintained, and projects are delivered on time.

Your systems and business knowledge will be key to the role, and you will need to utilise this knowledge in your day-to-day responsibilities in the test arena.
You will have the opportunity to learn the details of the test preparation and execution stages of the test activity in a project as well as the overall software development life cycle process.

You will be working alongside the Senior Software Tester, projects team, and specialist systems teams to ensure projects meet the documented requirements and are bug free prior to release.
You will be involved in completing test plans, designing test cases, writing and maintaining test scripts, and executing the planned test cycles via the test management tool.

There will also be elements of the role which will require direct customer communication, either virtually or in person, and you will be required to facilitate, steer and advise on test cases, participation and results.

Outside of Project work and system development there will also be elements of testing required across other applications, including Integration Change Requests (Fuse/Jitterbit), software modifications and other applications (Tableau / GFS Selector / Automation).

Job Content:

- Review project/client requirements to understand what needs to be tested on a project
- With Senior Software Tester's assistance create well-structured test plans and test cases that will test the functional requirements in full
- Execute the manual tests via ILG's test management tool and ILG's software
- Identify, raise and track any bugs identified during testing
- Perform the necessary regression testing to ensure that all system areas function as expected
- Liaise with internal teams during test execution to communicate any issues
- Attend regular project update meetings
- Help to maintain existing regression test packs
- Assist in knowledge share of ILG's systems
- Supporting Client Test Needs

Selection Criteria:

- Good knowledge of ILG systems: (e.g. SNAP / 3ex / Netcourier)
- Good knowledge of ILG business and workflow processes
- Excellent communication skills (verbal and written)
- Excellent time management skills
- Excellent organisation skills
- An assertive and diplomatic personality
- The ability to prioritise work
- The ability to work autonomously or part of a team
- The ability to manage more than one task at any one time
- The ability, and a willingness, to perform repetitive tasks when required
- Good problem analysis and resolution skills
- Familiarity with Software Testing Methodology (desirable)
